Triangle similarity task

Debrief

Experimenter: Jon W. Carr (University of Edinburgh, UK)
Supervisors: Prof. Simon Kirby and Dr Kenny Smith

We have been running experiments in which participants communicate about triangles with each other. Our aim is to study how languages emerge when people communicate.

To assist in our analysis, we require similarity ratings from naive participants so that we can understand how people perceive these triangle shapes. You provided a subset of the many thousands of ratings we require, and your ratings will be averaged together with other online participants.

We do not collect personally identifiable information about you. However, if you have concerns about how your results will be used or you would like further information about the study, please contact j.w.carr@ed.ac.uk
